

# SYSTEMS MODELLING AS AN AID TO CAPACITY BUILDING

Sustainable Development Indicators for the Minerals Industry Milos 2007

*Chris Moran*

Sustainable Minerals Institute  
University of Queensland  
Australia

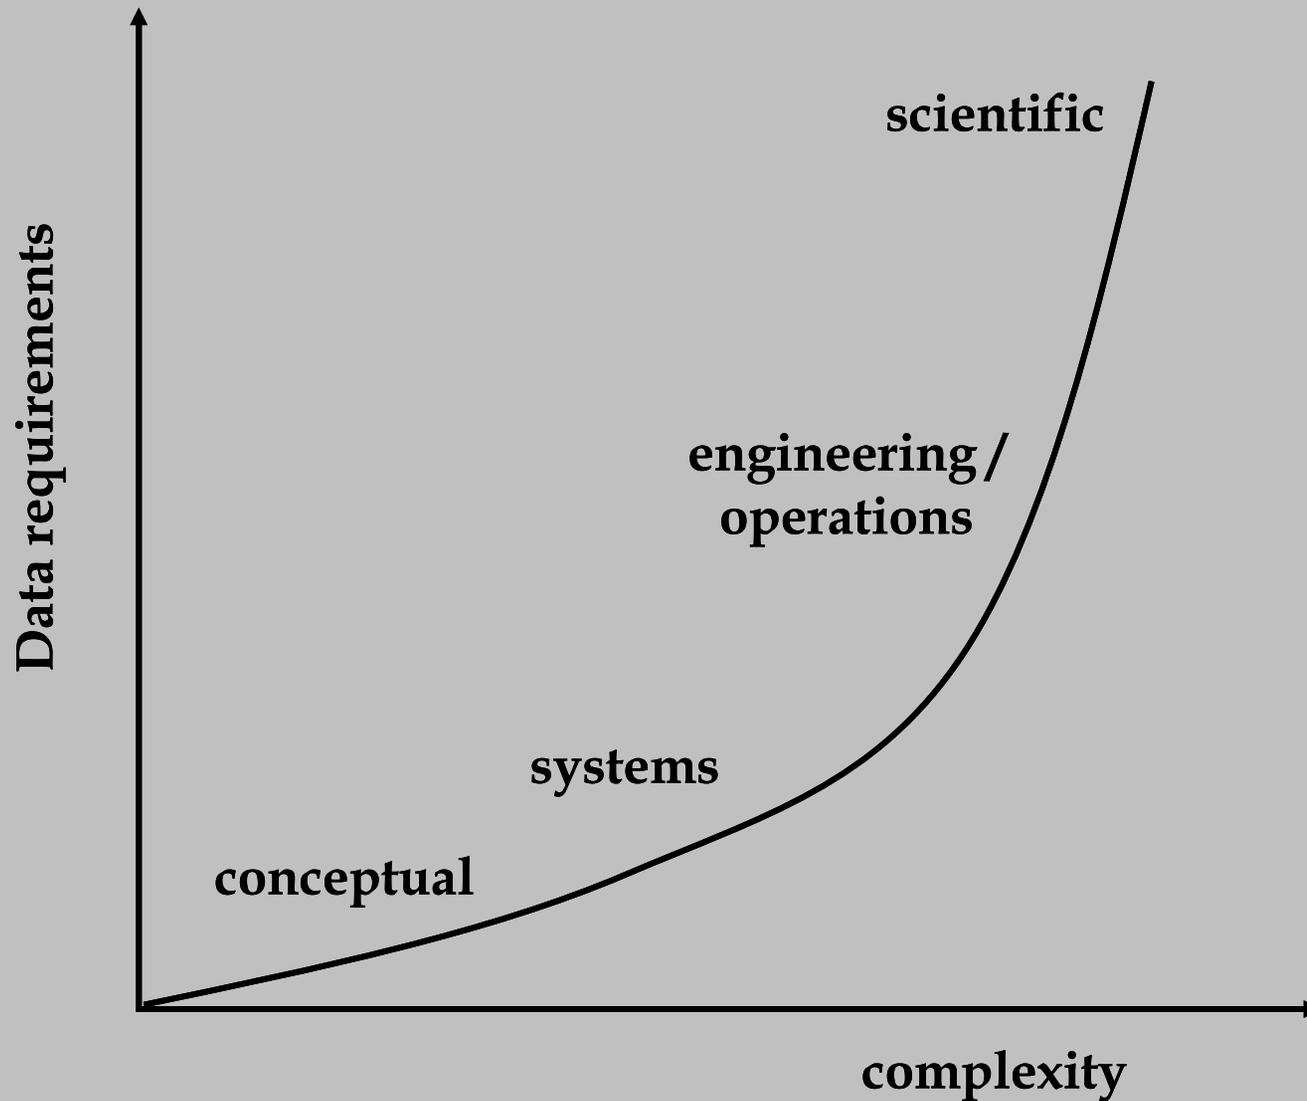

# PROPOSITION

*Capacity building, for workforce and community, can be aided by a formal systems modelling approach.*

**What is a systems model?**

**It is a representation of a problem and/or physical system that establishes the *critical components* and focuses on the *interactions* between them rather than the details of how the components function.**

# TYPES OF MODELS

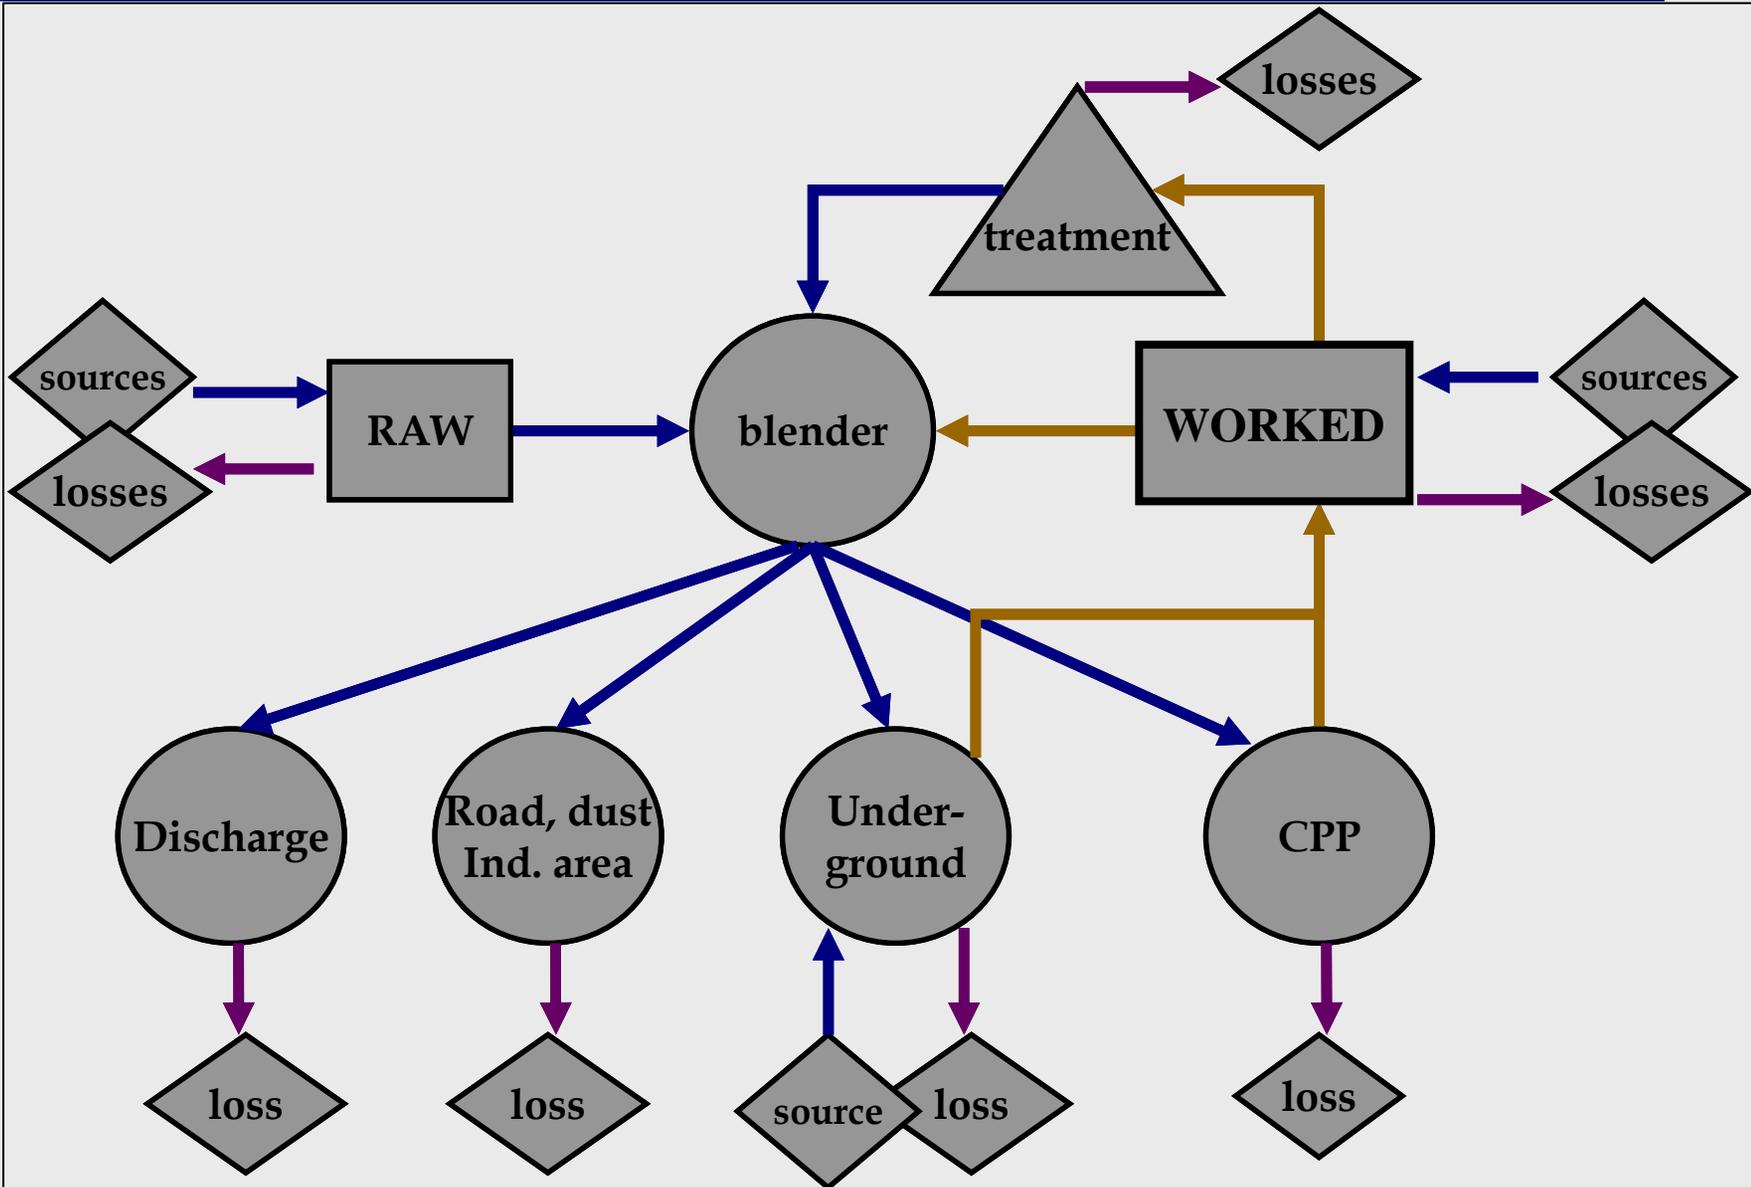

**EXAMPLE:  
Mine site water  
management**

# SYSTEMS MODEL

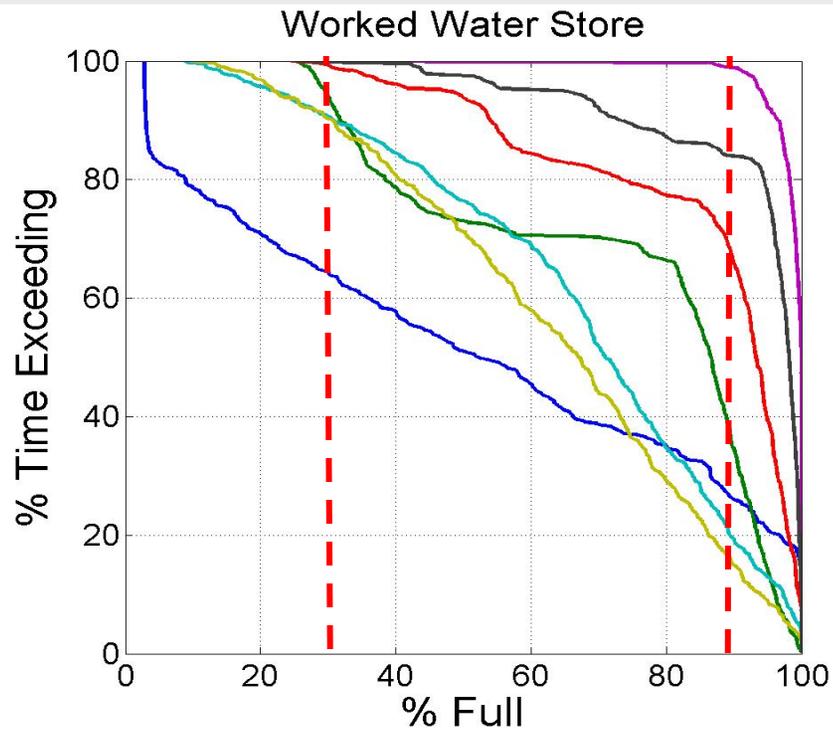

# EXAMPLE OBJECTIVES

		Conceptual model - system levels		
		Governance	Surrounding community & environment	Site/technical
Best practice layer	Technical performance	1. Adopt leading practices for water use productivity (ML/Mt) in coal preparation and underground mining.	1. Minimise discharge of worked water.  2. Minimise use of fresh water (the minimum fresh water requirements are potable water, fire fighting and 5% CHPP make-up for vacuum pumps)	1. There should be no loss of production due to inability to supply fit-for-purpose water.

# LEADING PRACTICE EXAMPLE: INFORMATION + SYSTEMS MODEL

*Current*

*Site Nirvana*

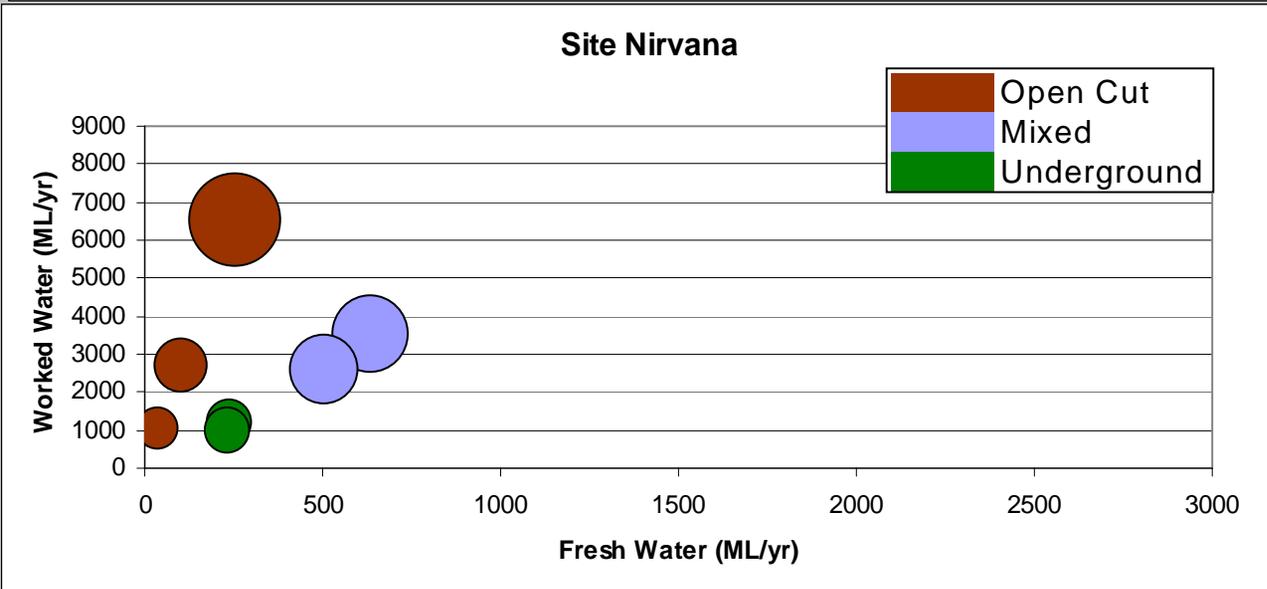

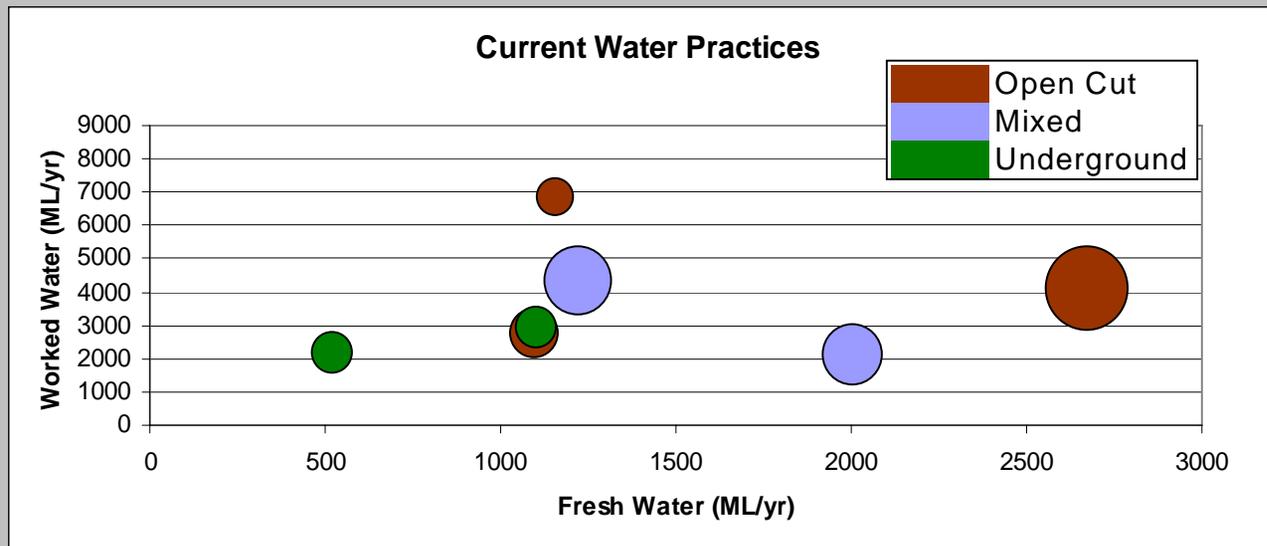

# SUMMARY OF SITE CHANGES

MIN FRESH WATER USE + LEADING RATIOS +:

		Worked Water Storage Capacity (ML)			Drainage Area (ha)			Evap. control
		Current	Practice	Inc.	Current	Practice	Inc.	25% red.
Mine 1	O/C	226	2750	12.2	1683	2104	1.3	✓
Mine 2	Mixed	16000	17000	1.1	4088	4088	1.0	✗
Mine 3	O/C	10000	10000	1.0	6289	9434	1.5	✓
Mine 4	O/C	1600	7000	4.4	896	896	1.0	✓
Mine 5	U/G	802	34000	42.4	1891	1891	1.0	✗
Mine 6	U/G	908	22750	25.1	661	1900	2.9	✗
Mine 7	Mixed	16210	40000	2.5	3641	3641	1.0	✗

# SUMMARY OF SITE PERFORMANCE

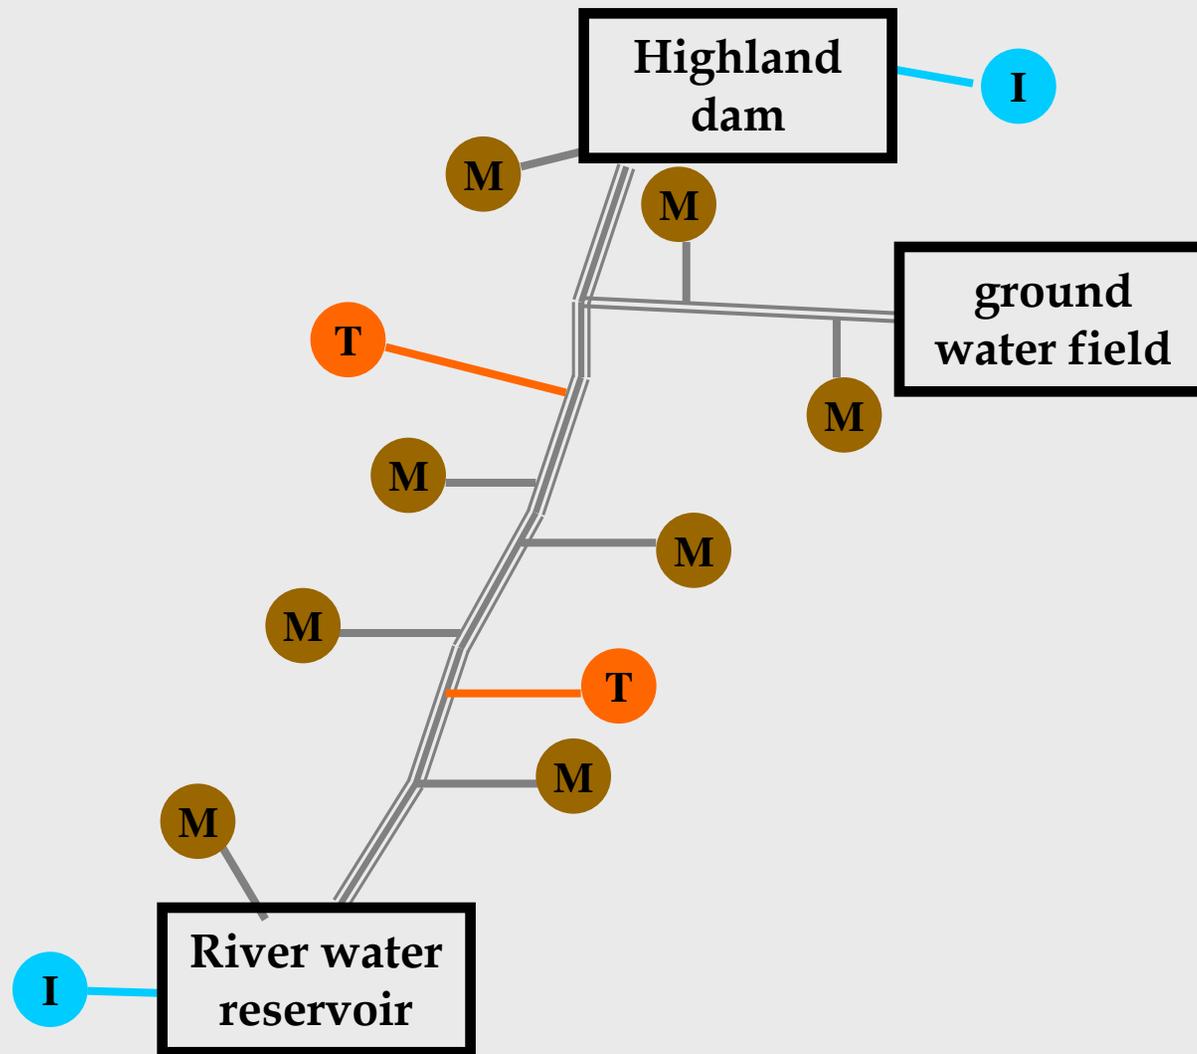

# Expanding the system

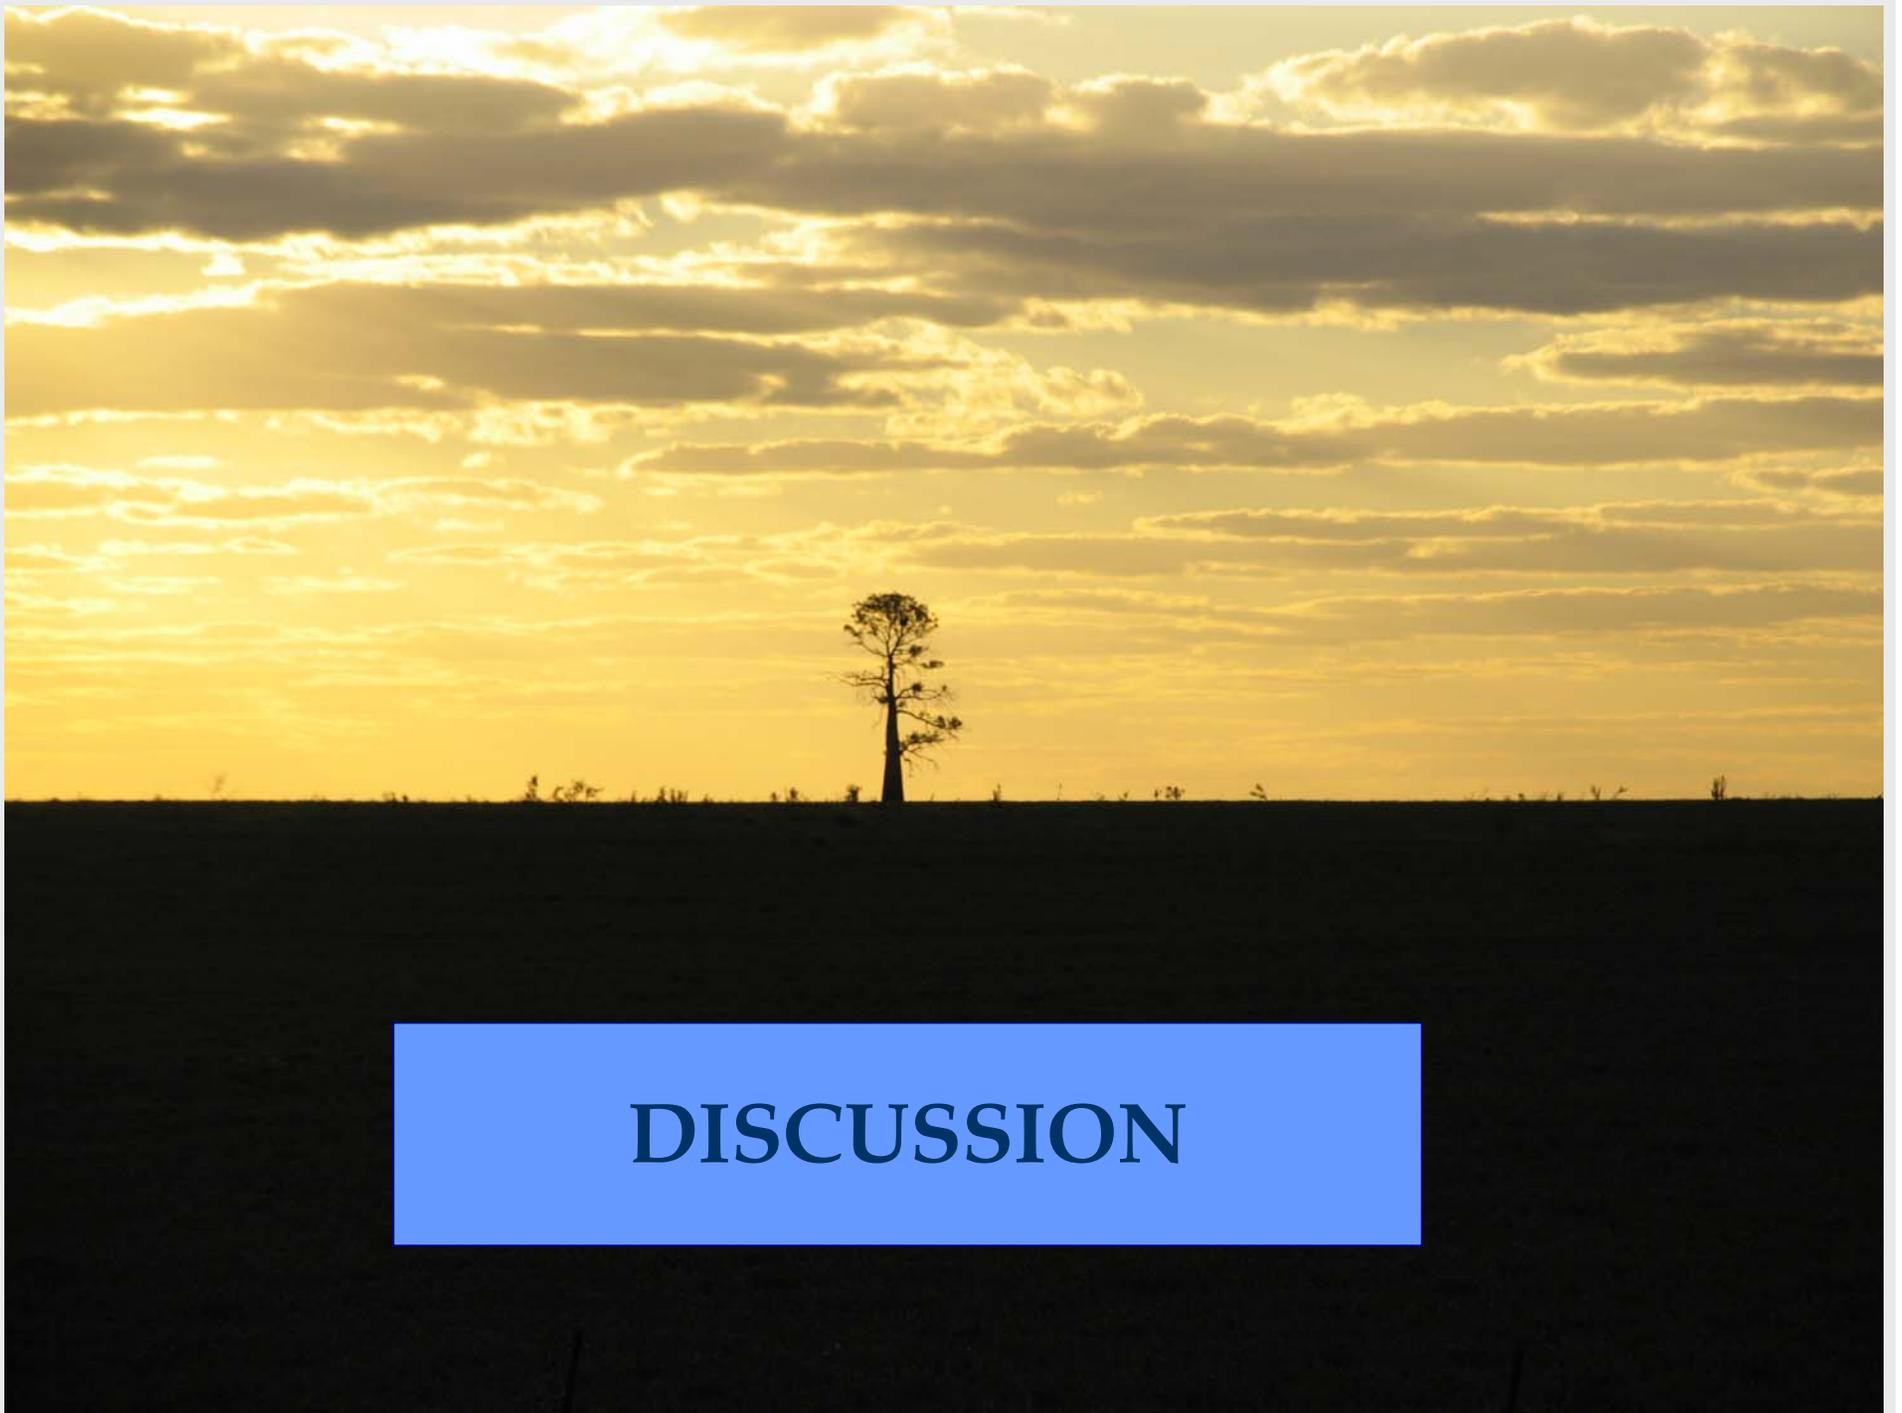

## System Boundary

# Multiple mines and other users

- T** Town
- I** Irrigator
