Corporate Sustainability Reporting for Water: Water Footprint, Global Reporting Initiative and the Water Accounting Framework

Natasha Danoucaras\*, Alan Woodley and Sue Vink \*Presenting author

#### University of Queensland, Brisbane, Australia The Sustainable Minerals Institute

# **Talk outline**

- Comparing three sustainability reporting initiatives that report on water use in mining
  - The Water Accounting Framework
  - Global Reporting Initiative
  - Water Footprint
- Purpose of the initiative
- For each one will go through:
  - The indicators to be reported and how to calculate them
- Suitability of the indicators for water reporting in mining

## Purpose of Initiative

Water Accounting Framework	Global Reporting Initiative	Water Footprint
Provides definitions for consistent sustainability reporting of water.	Snapshot of 30 sustainability indicators for water, materials, biodiversity, effluent and transport.	To encourage downstream users to understand the concept of direct and indirect water use.
Can then provide numbers for other initiatives.	EN8 Total water withdrawals EN21 Discharged water EN10 Reuse and recycled water	Blue water footprint of a process step.

## Site configuration using systems level representation

4

#### Water Accounting Framework Input-Output Statement

Inputs	Volume (ML)	Source	Quality
Rainfall	709	Surface	1
Runoff from undisturbed land	1334	Surface	1
Runoff from disturbed land	2019	Surface	2
River	716	Surface	1
Groundwater	693	Ground	2
Entrainment in ROM	641	Ground	2
Total Inputs	6112		
Outputs	Volume (ML)	Destination	Quality
Outputs Third-party entity	Volume (ML) 49	<b>Destination</b> Third party	<b>Quality</b> 1
Outputs Third-party entity Evaporation from stores	<b>Volume (ML)</b> 49 1849	DestinationThird partyOther	<b>Quality</b> 1 1
Outputs Third-party entity Evaporation from stores Evaporation (dust suppression)	<b>Volume (ML)</b> 49 1849 2311	DestinationThird partyOtherOther	<b>Quality</b> 1 1 1 1 1
Outputs Third-party entity Evaporation from stores Evaporation (dust suppression) Seepage	<b>Volume (ML)</b> 49 1849 2311 296	DestinationThird partyOtherOtherGround	<b>Quality</b> 1 1 1 1 2
OutputsThird-party entityEvaporation from storesEvaporation (dust suppression)SeepageEntrainment (tailings, product, coarse rejects)	Volume (ML)49184923112961129	DestinationThird partyOtherOtherGroundOther	<b>Quality</b> 1 1 1 2 2 2
OutputsThird-party entityEvaporation from storesEvaporation (dust suppression)SeepageEntrainment (tailings, product, coarse rejects)Task Loss	Volume (ML)49184923112961129768	DestinationThird partyOtherOtherGroundOtherOther	<b>Quality</b> 1 1 1 1 2 2 2 2

## Water Accounting Framework Reuse Efficiency

Reuse Efficiency = <u>Sum of Worked Water Flows to Tasks</u> Sum of All Flows to Tasks

Sum of all flows to tasks = 6944 ML

## Calculating the proportion of worked water

- Only 17% of the water in the store is worked water
- Sum of worked water flows to tasks = 2152 ML
- Reuse efficiency = 29%

## GRI Indicators relating to inputs and outputs

#### EN8Total water withdrawn by source.

Source	ML/year
Surface Water (in a conveter)	716
Surface water (inc seawater)	/10
Groundwater	1334
Doinwotor	4062
Kamwater	4002
Waste Water	0
Municipal Water	0

#### EN 21 Total water discharge = 0

## **GRI Reuse and recycling EN10**

- Volume of reused water including rainwater is 4552ML
- Rainwater inflates the reuse volume
- Reuse volume is reported against site inputs (which includes rainwater) 6112 ML
- Reuse efficiency 74%
- Climate driven metric
- Inconsistent definition

#### Water Footprint Process Step

- Blue water footprint: Surface water and groundwater that is not returned to the same catchment
- Evaporation, water in products, transfer to other catchments
- Can read off the output list of the Water Accounting Framework
- Third-party, Evaporation, Seepage, Entrainment (tailings, product, coarse rejects), Task Loss
- Total Outputs = 6402 ML

# Comparison

Concept	Water Accounting Framework	Global Reporting Initiative	Water Footprint
Water use	Task demands	Water withdrawals	Water that is lost
Suitability to mining	Complete account. Feeds other initiatives. Consistent definitions.	Only reports inputs and discharge volumes. Definition of reuse flawed.	Blue water footprint of mining can be supplied to mining customers.
Reuse efficiency	Vol worked water to tasks Vol all flows to tasks =29%	<u>Vol of reused</u> <u>water</u> Vol of site inputs =74%	No equivalent
